

Product description:

ASME B16.34 design standard

Rising stem ,Pressure Seal

Flexible Wedge design to improve seat and ease operate, when in high temperature fluid

Entire stroke could guide wedge accurately.

Stellite overlay and installed with seal weld seat ring

Superior sealing and smooth finish of seat faces lapped

Prolonged function and more compact valves characterized by light weight, small volume and less maintenance, specifically designed for the high temperature and the high pressure services encountered in nuclear and fossil

fuel power plants.
