

Product description:

ASME B16.34 design standard

Pressure Seal, OS&Y, Rising Stem

Flexible Wedge

RT (Radiographic Testing)

Prolonged function and more compact valves characterized by light weight, small volume and less maintenance, specifically designed for the high pressure services encountered in Chemical industry.

Features :

- 1.Swing eyebolts and gland flange facilitate repacking
- 2.Inner row of studs establish the initial seal of the pressure seal joint
- 3.By inserting knockout pin in drilled hole, segmental thrust ring can be easily driven out retaining groove.
- 4.Stellited back seat seal area provides accurate guiding of stem
- 5.Segmental thrust ring absorbs all the thrust applied by internal pressure
