Product description:
API 600 design standard
Test standard:API598
RF OS&Y, Rising Stem
A351 CF10M Casting gate valve body

Instruction for API600 gate valve application and function:

Gate valves are primarily used for stop valves fully opened or fully closed. They are not normally considered for throtting purposes, but more for slurries, viscous fluids, etc.

Gate valve are characterize by a traveling wedge ,which is moved with the operation of the stem nut. The wedge travels perpendicular to the direction of the flow.

Gate valves usually have a minimum pressure drop when fully open, provide tight shut-off when fully closed, and remain relatively free of contamination buildup.
